ABOUT ME

I am a Software Developer with over 4 years of experience building efficient and scalable web applications. Currently, I work at Aerolab, where I lead the development of an internal platform for endeavor.org, enabling staff across 40+ offices worldwide to efficiently access and manage key organizational data. My expertise lies in combining strong technical skills, such as React, TypeScript, and Next.js, with a collaborative mindset in Agile environments, contributing both as an individual contributor and as a technical leader.

I am passionate about building high-quality digital products that support business goals, improve user experience, and deliver long-term value.

EXPERIENCE

Software Developer

Aerolab — Argentina · Remote

2025 – Present

- Lead developer for an internal platform for endeavor.org, enabling staff across **40+ offices worldwide** to efficiently access and manage key organizational data.
- Provide technical leadership by defining coding standards, conducting code reviews, and mentoring team members.
- Collaborate on roadmap planning, effort estimations, and prioritization to align technical delivery with business goals.
- Build and maintain scalable frontend solutions using React, TypeScript, Next.js, and TailwindCSS, with a strong focus on performance and usability.

Frontend Developer

Viking Sasquatch, LLC — United States · Remote

2022 – 2024

- Developed and maintained mortgage and loan web applications across multiple projects, including the **FirstClose** platform.
- Built efficient, user-friendly interfaces for complex financial workflows, improving usability and system reliability.
- Migrated a legacy mortgage application from Vue.js to React, significantly enhancing scalability and long-term maintainability.
- Refactored and migrated **40+ legacy components** to React.js, applying modern best practices to reduce development time and prevent technical debt.
- Led frontend performance optimization initiatives, reducing load times and aligning technical improvements with business and user expectations.

Frontend Developer

Esto Es — Argentina

2022

- Migrated DossierNet from CodeIgniter to Next.js, significantly improving performance through SSR and ISR.
- Developed and optimized features for Telecom Argentina's institutional website.
- Created a tool for visually developing agnostic components, integrating Figma's design system.

SKILLS
